

burpsuite

Burp Suite is an integrated platform for performing security testing of web applications. Its various tools work seamlessly together to support the entire testing process, from initial mapping and analysis of an application's attack surface, through to finding and exploiting security vulnerabilities.

Burp gives you full control, letting you combine advanced manual techniques with state-of-the-art automation, to make your work faster, more effective, and more fun.

Installed size: 290.98 MB

How to install: `sudo apt install burpsuite`

Dependencies:

- default-jre
- java-wrappers

```
root@kali:~# burpsuite --help
```

Usage:

<code>--help</code>	Print this message
<code>--version</code>	Print version details
<code>--disable-extensions</code>	Prevent loading of extensions on startup
<code>--diagnostics</code>	Print diagnostic information
<code>--use-defaults</code>	Start with default settings
<code>--collaborator-server</code>	Run in Collaborator server mode
<code>--collaborator-config</code>	Specify Collaborator server configuration file; defaults to collaborator.config
<code>--data-dir</code>	Specify data directory
<code>--project-file</code>	Open the specified project file; this will be created as a new project if the file does not exist
<code>--developer-extension-class-name</code>	Fully qualified name of locally-developed extension class; extension will be loaded from the classpath

--config-file Load the specified project configuration file(s); this option may be repeated to load multiple files

--user-config-file Load the specified user configuration file(s); this option may be repeated to load multiple files

--auto-repair Automatically repair a corrupted project file specified by the --project-file option

--unpause-spider-and-scanner Do not pause the Spider and Scanner when opening an existing project

--disable-auto-update Suppress auto update behavior
