Packages and Binaries:

pspy

pspy is a command line tool designed to snoop on processes without need for root permissions. It allows you to see commands run by other users, cron jobs, etc. as they execute. Great for enumeration of Linux systems in CTFs. Also great to demonstrate your colleagues why passing secrets as arguments on the command line is a bad idea.
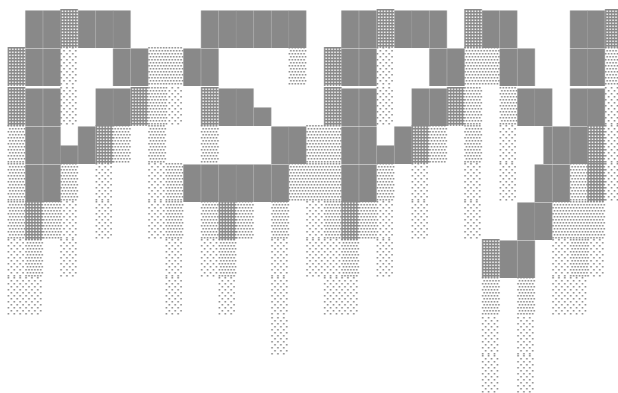

Installed size: 9.21 MB
How to install: sudo apt install pspy

> Dependencies:
>   libc6

pspy

```
root@kali:~# pspy -h
pspy - version: 1.2.1 - Commit SHA: kali
```

```
Usage:
  pspy [flags]

Flags:
  -c, --color                color the printed events (default t
      --debug                print detailed error messages
  -d, --dirs stringArray     watch these dirs
  -f, --fsevents             print file system events to stdout
```

```
   -h, --help                        help for pspy
   -i, --interval int                scan every 'interval' milliseconds
       --ppid                        record process ppids
   -p, --procevents                  print new processes to stdout (defau
   -r, --recursive_dirs stringArray  watch these dirs recursively (defaul
   -t, --truncate int                truncate process cmds longer than th
```

pspy-binaries

```
root@kali:~# pspy-binaries -h

> pspy ~ Monitor Linux processes without root permissions

/usr/share/pspy
|-- pspy32
|-- pspy32s
|-- pspy64
`-- pspy64s
```
